

ANTIMICROBIAL

AIR CONDITIONING INTERNAL TREATMENT

YOU CAN'T SEE THEM, BUT MICROSCOPIC BACTERIA ARE BREEDING IN YOUR CAR.

Your car is a breeding ground for germs and bacteria, particularly in air-conditioning and heating systems when turned on airborne bacteria and allergens can get blown straight into your face.

Studies have shown that your vehicle is one of the unhealthiest environments, with you and your family being exposed to so many different strains of bacterial viruses daily.

Antimicrobial Air Conditioning Internal Treatment is an environmentally friendly, water-based solution that forms an invisible, long lasting barrier that actively protects surfaces from the build-up of organic matter including bacteria, moulds, germs and allergens.

One treatment will help provide you an odour-free, germ-free and allergen-free vehicle, giving you peace of mind and a healthier environment.

REMOVES
BACTERIA & MOULD

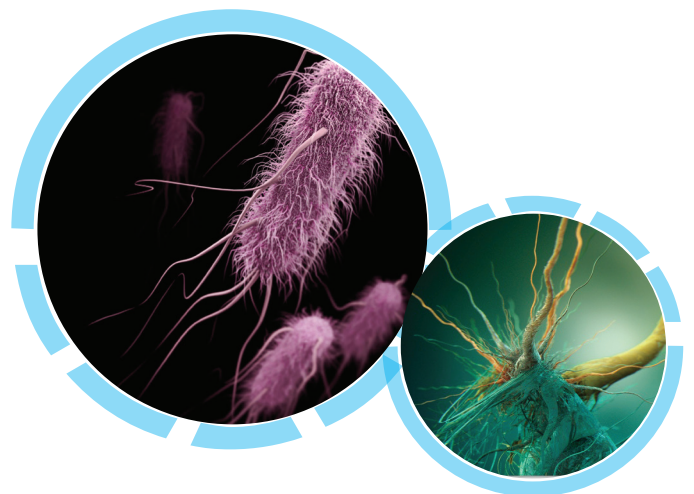

INHIBITS
BACTERIA GROWTH

ELIMINATES
UNPLEASANT ODOURS

WHY INVEST IN AN ANTIMICROBIAL AIRCONDITIONING INTERIOR TREATMENT

- Kills off bacteria, mould, germs and allergens
- Cleaner air through the air vents in your car
- Keeps working long after treatment
